
Dieses Gerät entspricht den Anforderungen der EG-Richtlinien 89/336/EWG und 73/23/EWG mit Änderung 93/68/EWG.

Ce matériel répond aux exigences contenues dans les directives 89/336/CEE et 73/23/CEE modifiées par la directive 93/68/CEE.

Dit apparaat voldoet aan de eisen van de richtlijnen 89/336/EEG en 73/23/EEG, gewijzigd door 93/68/EEG.

Dette udstyr overholder kravene i direktiv nr. 89/336/EEG og 73/23/EEC med tillæg nr. 93/68/EEC.

Quest’apparecchio è conforme ai requisiti delle direttive 89/336/EEC e 73/23/EEC, come emendata dalla direttiva 93/68/EEC.

Αυτή η συσκευή συμμορφώνεται με τις απαιτήσεις των οδηγιών του Συμβουλίου 89/336/ΕΟΚ και 73/23/ΕΟΚ όπως τροποποιηθηκαν από την οδηγία του Συμβουλίου 93/68/ΕΟΚ.

Este equipamento obedece às exigências das directivas 89/336/CEE e 73/23/CEE, na sua versão corrigida pela directiva 93/68/CEE.

Este aparato satsifase las exigencias de las Directivas 89/336/CEE y 73/23/CEE, modificadas por medio de la 93/68/CEE.

Denna utrustning uppfyller kraven enligt riktlinjerna 89/336/EEC och 73/23/EEC så som kompletteras av 93/68/EEC.

Dette produktet oppfyller betingelsene i direktivene 89/336/EEC og 73/23/EEC i endringen 93/68/EEC.

Tämä laite täyttää direktiivien 89/336/EEC ja 73/23/EEC vaatimukset, joita on muutettu direktiivillä 93/68/EEC.

Tento přístroj je v souladu s požadavky směrnic rady 89/336/EEC a 73/23/EEC, tak jak byly upraveny směrnicí rady 93/68/EEC.

Ez a készülék megfelel a Tanács által kiadott, 89/336/EGK és 73/23/EGK Irányelveknek és az utóbbi módosító 93/68/EGK Irányelveknek

Ši iberice atbilst tehnikam prasibam pec 89/336/EEC un 73/23/EEC direktivam papildinats ar direktivu 93/68/EEC.

To urządzenie spełnia wymagania dyrektyw 89/336/EEC i 73/23/EEC wraz z poprawkami dyrektywy 93/68/EEC.

Tento přístroj je v súlade s požiadavkami smernic rady 89/336/EEC a 73/23/EEC tak ako boli upravené smernicou rady 93/68/EEC.

Ta aparat je v skladu z zahtevami Direktiv Sveta 89/336/EEC in 73/23/EEC kot je navedeno v dopolnilu k Direktivi Sveta 93/68/EEC.
SPECIAL NOTE FOR USERS IN THE U.K.
The mains lead of this product is fitted with a non-rewireable (moulded) plug incorporating a 10A fuse. Should the fuse need to be replaced, a BSI or ASTA approved BS 1362 fuse marked ☐ or ☐ and of the same rating as above, which is also indicated on the pin face of the plug, must be used. Always refit the fuse cover after replacing the fuse. Never use the plug without the fuse cover fitted. In the unlikely event of the socket outlet in your home not being compatible with the plug supplied, cut off the mains plug and fit an appropriate type.

DANGER:
The fuse from the cut-off plug should be removed and the cut-off plug destroyed immediately and disposed of in a safe manner. Under no circumstances should the cut-off plug be inserted elsewhere into a 10A socket outlet, as a serious electric shock may occur. To fit an appropriate plug to the mains lead, follow the instructions below:

WARNING:
THIS APPARATUS MUST BE EARTHED.
IMPORTANT:
The wires in this mains lead are coloured in accordance with the following code:
- Green-and-yellow : Earth
- Blue : Neutral
- Brown : Live
As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:
- The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked by the letter E or by the safety earth symbol ☐ or coloured green or green-and-yellow.
- The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.
- The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

IF YOU HAVE ANY DOUBT, CONSULT A QUALIFIED ELECTRICIAN.
Before using the projector, please read this operation manual carefully.

**Introduction**

**IMPORTANT**
For your assistance in reporting the loss or theft of your Projector, please record the Serial Number located on the bottom of the projector and retain this information. Before recycling the packaging, please ensure that you have checked the contents of the carton thoroughly against the list of “Supplied accessories” on page 5.

**WARNING:** High brightness light source. Do not stare into the beam of light, or view directly. Be especially careful that children do not stare directly into the beam of light.

**WARNING:** To reduce the risk of fire or electric shock, do not expose this product to rain or moisture.

See bottom of projector.

**CAUTION**

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk or electric shock to persons.

The exclamation point within a triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

**WARNING:**
The cooling fan in this projector continues to run for about 90 seconds after the projector enters the standby mode. During normal operation, when putting the projector into standby mode always use the STANDBY button on the projector or on the remote control. Ensure the cooling fan has stopped before disconnecting the power cord. DURING NORMAL OPERATION, NEVER TURN THE PROJECTOR OFF BY DISCONNECTING THE POWER CORD. FAILURE TO OBSERVE THIS WILL RESULT IN PREMATURE LAMP FAILURE.

**PRODUCT DISPOSAL**
This projector utilises tin-lead solder, and a pressurised lamp containing a small amount of mercury. Disposal of these materials may be regulated due to environmental considerations. For disposal or recycling information, please contact your local authorities or, if you are located in the United States of America, the Electronic Industries Alliance: www.eiae.org.
Caution Concerning Lamp Replacement

See "Replacing the Lamp" on page 56.

LAMP REPLACEMENT WARNING:
TURN OFF THE LAMP AND DISCONNECT POWER CORD BEFORE OPENING THIS COVER. HOT SURFACE INSIDE. ALLOW 1 HOUR TO COOL BEFORE REPLACING THE LAMP. REPLACE WITH SAME SHARP LAMP UNIT MODEL AN-K2LP ONLY.

HIGH PRESSURE LAMP: RISK OF EXPLOSION. POTENTIAL HAZARD OF GLASS PARTICLES IF LAMP HAS RUPTURED. HANDLE WITH CARE. SEE OPERATION MANUAL.

SERVICEMAN-WARNING: USE RADIATION EYE AND SKIN PROTECTION DURING SERVICING.

AVERTISSEMENT CONCERNANT LE REMPLACEMENT DE LA LAMPE:
ETEINDRE LA LAMPE ET DEBRANCHER LE CORDON D’ALIMENTATION AVANT D’OUVRIR LE COUVERCLE. L’INTERIEUR DU BOITIER ETANT EXTREMEMENT CHAUD, ATTENDRE 1 HEURE AVANT DE PROCEDER AU REMPLACEMENT DE LA LAMPE. NE REMPLACER QUE PAR UNE LAMPE SHARP DE MODELE AN-K2LP.

LAMPE A HAUTE PRESSION: RISQUE D’EXPLOSION. DANGER POTENTIEL DE PARTICULES DE VERRE EN CAS D’ECLATEMENT DE LA LAMPE. A MANIPULER AVEC PRECAUTION.

AVERTISSEMENT – REPARATEUR: SE PROTEGER LES YEUX ET LA PEAU DES RADIATIONS LORS DES REPARATIONS.

WARNING:
Some IC chips in this product include confidential and/or trade secret property belonging to Texas Instruments. Therefore you may not copy, modify, adapt, translate, distribute, reverse engineer, reverse assemble or discompile the contents thereof.

This SHARP projector uses a DMD panel. This very sophisticated panel contains 921,600 pixels micromirrors. As with any high technology electronic equipment such as large screen TVs, video systems and video cameras, there are certain acceptable tolerances that the equipment must conform to. This unit has some inactive pixels within acceptable tolerances which may result in inactive dots on the picture screen. This will not affect the picture quality or the life expectancy of the unit.

### Accessories

#### Supplied accessories

- **Remote control**
- **Two AA size batteries**
- **Power cord**
  - (1) For Europe, except U.K. (1.8 m)
  - (2) For U.K., Hong Kong and Singapore (1.8 m)
  - (3) For Australia, New Zealand and Oceania (1.8 m)

*Use the power cord that corresponds to the wall outlet in your country.*

- **3 RCA to 15-pin D-sub cable (3.0 m) AN-C3CP2**
- **DVI to 15-pin D-sub adaptor (20 cm) AN-A1DV**
- **DVI cable (3.0 m) AN-C3DV**
- **Lamp unit AN-K2LP**

- **21 pin RCA conversion adaptor** (Supplied for Europe only)
- **Video cable**
- **Lens cap (attached)**
- **Operation manual**

#### Optional accessories

- **21 pin RCA conversion adaptor** (Supplied for Europe only)
- **Video cable**
- **Lens cap (attached)**
- **Operation manual**

#### Note

- Some of the optional accessories may not be available depending on the region. Please check with your nearest Sharp Authorised Projector Dealer or Service Centre.

---

### Marks Used in This Operation Manual

- **Info** ........Indicates safeguards when using the projector.
- **Note** ........Indicates additional information for setting up and operating the projector.

- In this operation manual, the illustration and the screen display are simplified for explanation, and may differ slightly from actual display.
IMPORTANT SAFEGUARDS

CAUTION: Please read all of these instructions before you operate this product and save these instructions for later use.

Electrical energy can perform many useful functions. This product has been engineered and manufactured to assure your personal safety. BUT IMPROPER USE CAN RESULT IN POTENTIAL ELECTRICAL SHOCK OR FIRE HAZARDS. In order not to defeat the safeguards incorporated in this product, observe the following basic rules for its installation, use and servicing.

1. Read Instructions
   All the safety and operating instructions should be read before the product is operated.

2. Retain Instructions
   The safety and operating instructions should be retained for future reference.

3. Heed Warnings
   All warnings on the product and in the operating instructions should be adhered to.

4. Follow Instructions
   All operating and use instructions should be followed.

5. Cleaning
   Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

6. Attachments
   Do not use attachments not recommended by the product manufacturer as they may cause hazards.

7. Water and Moisture
   Do not use this product near water—for example, near a bath tub, wash bowl, kitchen sink, or laundry tub; in a wet basement; or near a swimming pool; and the like.

8. Accessories
   Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the product. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the product. Any mounting of the product should follow the manufacturer's instructions, and should use a mounting accessory recommended by the manufacturer.

9. Transportation
   A product and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the product and cart combination to overturn.

10. Ventilation
    Slots and openings in the cabinet are provided for ventilation to ensure reliable operation of the product and to protect it from overheating, and these openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface. This product should be situated away from heat sources such as radiators, heat registers, stoves, or other products that produce heat.

11. Power Sources
    This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your product dealer or local power company. For products intended to operate from battery power, or other sources, refer to the operating instructions.

12. Grounding or Polarization
    This product is provided with one of the following types of plugs. If the plug should fail to fit into the power outlet, please contact your electrician.
    a. Two-wire type (mains) plug
    b. Three-wire grounding type (mains) plug with a grounding terminal.
    This plug will only fit into a grounding type power outlet.

13. Power-Cord Protection
    Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the product.

14. Lightning
    For added protection for this product during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the cable system. This will prevent damage to the product due to lightning and power-line surges.

15. Overloading
    Do not overload wall outlets, extension cords, or integral convenience receptacles as this can result in a risk of fire or electric shock.

16. Object and Liquid Entry
    Never push objects of any kind into this product through open cabinet slots as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.

17. Servicing
    Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

18. Damage Requiring Service
    Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
    a. When the power-supply cord or plug is damaged.
    b. If liquid has been spilled, or objects have fallen into the product.
    c. If the product has been exposed to rain or water.
    d. If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions, as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
    e. If the product has been dropped or damaged in any way.
    f. When the product exhibits a distinct change in performance, this indicates a need for service.

19. Replacement Parts
    When replacement parts are required, ensure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.

20. Safety Check
    Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.

21. Wall or Ceiling Mounting
    This product should be mounted to a wall or ceiling only as recommended by the manufacturer.

22. Heat
    This product should be situated away from heat sources such as radiators, heat registers, stoves, or other products (including amplifiers) that produce heat.
Ensure that you read the following safeguards when setting up your projector.

Caution concerning the lamp unit
■ Potential hazard of glass particles if lamp ruptures.
In case of lamp rupture, contact your nearest Sharp Authorised Projector Dealer or Service Centre for a replacement.
See “Replacing the Lamp” on page 56.

Caution concerning the setup of the projector
■ For minimal servicing and to maintain high image quality, SHARP recommends that this projector be installed in an area free from humidity, dust and cigarette smoke. When the projector is subjected to these environments, the vents and lens must be cleaned more often. As long as the projector is regularly cleaned, use in these environments will not reduce the overall operation life of the unit. Internal cleaning should only be performed by a Sharp Authorised Projector Dealer or Service Centre.

Do not set up the projector in places exposed to direct sunlight or bright light.
■ Position the screen so that it is not in direct sunlight or room light. Light falling directly on the screen washes out the colours, making viewing difficult. Close the curtains and dim the lights when setting up the screen in a sunny or bright room.

The projector may be safely tilted to a maximum angle of 12 degrees.
■ Placement should be within ±12 degrees of horizontal.

Warning about placing the projector in a high position
■ When placing the projector in a high position, ensure to secure it carefully to avoid personal injury caused by the projector falling down.

Do not subject the projector to hard impact and/or vibration.
■ Take care with the lens so as not to hit or damage the surface of the lens.

Rest your eyes occasionally.
■ Continuously watching the screen for long hours will cause eye strain. Ensure to occasionally rest your eyes.

Avoid locations with extremes of temperature.
■ The operating temperature of the projector is from +5°C to +35°C.
■ The storage temperature of the projector is from –20°C to +60°C.

Do not block the exhaust and intake vents.
■ Allow at least 20 cm of space between the exhaust vent and the nearest wall or obstruction.
■ Ensure that the intake vent and the exhaust vent are not obstructed.
■ If the cooling fan becomes obstructed, a protection circuit will automatically put the projector into standby mode to prevent overheat damage. This does not indicate a malfunction (See pages 54 and 55). Remove the projector power cord from the wall outlet and wait at least 10 minutes. Place the projector where the intake and exhaust vents are not blocked, plug the power cord back in and turn on the projector. This will return the projector to the normal operating condition.
Caution regarding usage of the projector
■ When using the projector, ensure not to subject it to hard impact and/or vibration, as this can result in damage. Take extra care with the lens. If you are not to use the projector for a long time, ensure to unplug the power cord from the wall outlet, and disconnect any other cables connected to it.
■ Do not use the projector by holding the lens.
■ When you are not to use the projector for a long time, or storing the projector, ensure to attach the lens cap to the projector (See page 9.).
■ Do not expose the projector to direct sunlight or near heat sources. The projector may change colour or become deformed.

Other connected equipment
■ When connecting a computer or other audio-visual equipment to the projector, make the connections AFTER unplugging the power cord of the projector from the AC outlet and turning off the equipment to be connected.
■ Please read the operation manuals of the projector and the equipment to be connected for instructions on how to make the connections.

Using the projector in other countries
■ The power supply voltage and the shape of the plug may vary depending on the region or country you are using the projector in. When using the projector overseas, ensure to use an appropriate power cord for the country you are in.

Temperature monitor function
■ If the projector starts to overheat due to setup problems or blockage of the air vents, “X” and “TEMP” will illuminate in the lower left corner of the picture. If the temperature continues to rise, the lamp will turn off, the temperature warning indicator on the projector will blink, and after a 90-second cooling-off period the projector will enter the standby mode. Refer to “Maintenance Indicators” on page 54 for details.

Info
• The cooling fan regulates the internal temperature, and its performance is automatically controlled. The sound of the fan may change during projector operation due to changes in the fan speed. This does not indicate malfunction.
• Do not unplug the power cord during projection or cooling fan operation. This can cause damage due to rise in internal temperature, as the cooling fan also stops.
Part Names and Functions

Numbers in refer to the main pages in this operation manual where the topic is explained.

**Projector**

**Top View**

- **ON button**
  - Turn the power on.
- **STANDBY button**
  - Put the projector into standby mode.
- **RESIZE button**
  - Switch the picture display (STRETCH, SIDE BAR, etc.).
- **ENTER button**
  - Set items selected or adjusted on the menu.
- **UNDO button**
  - Undo an operation or returning to the previous display.
- **MENU button**
  - Display adjustment and setting screens.
- **ZOOM/FOCUS button**
  - Adjust the projected image size or adjust the focus.
- **INPUT button**
  - Switch input mode 1, 2, 3, 4, 5 or DIGITAL.
- **ZOOM/FOCUS button**
  - Adjust the projected image size or adjust the focus.
- **TEMPERATURE warning indicator**
  - Lamp indicator
- **LAMP indicator**
- **POWER indicator**

**Front View**

- **REMOTE control sensor**
- **HEIGHT ADJUST button**
  - Front adjustment foot (on the bottom of the projector)
- **ATTACHING the lens cap**
  - Push the lens cap on until it clicks into position.
- **REMOVING the lens cap**
  - Pull the lens cap directly outward.

*Attaching the lens cap*
*Removing the lens cap*
About the Indicators on the Projector

**Power indicator**
- Red on ... Normal (Standby)
- Green on ... Normal (Power on)

**Temperature warning indicator**
- Off ... Normal
- Red on ... The internal temperature is abnormally high. (See page 54.)

**Lamp indicator**
- Green on ... Normal
- Green blinks ... The lamp is warming up or shutting down.
- Red on ... The lamp has been shut down abnormally or needs to be changed. (See page 54.)
Using the Kensington Lock

• This projector has a Kensington Security Standard connector for use with a Kensington MicroSaver Security System. Refer to the information that came with the system for instructions on how to use it to secure the projector.
Part Names and Functions

Numbers in [ ] refer to the main pages in this operation manual where the topic is explained.

Remote Control

- **STANDBY button**: 28
  - Put the projector into standby mode.

- **KEYSTONE button**: 32
  - Enter the Keystone Correction mode.

- **ENTER button**: 39
  - Set items selected or adjusted on the menu.

- **UNDO button**: 34
  - Undo an operation or returning to the previous display.

- **INPUT 1 button**: 29

- **INPUT 2 button**: 29

- **INPUT 3 button**: 29

- **INPUT 4 button**: 29

- **AUTO SYNC button**: 46
  - Automatically adjust images when connected to a computer.

- **RGB/COMP. button**: 48
  - Switch the signal type (RGB or Component).

- **IRIS button**: 34
  - Switch “HIGH BRIGHTNESS MODE” or “HIGH CONTRAST MODE”.

- **ON button**: 28
  - Turn the power on.

- **MENU button**: 38
  - Display adjustment and setting screens.

- **Adjustment buttons**: 38
  - ( ▲ ▼ ◀ ◁ )

- **ZOOM/FOCUS button**: 30
  - Adjust the projected image size or adjusting the focus.

- **INPUT 5 button**: 29

- **DIGITAL INPUT button**: 29

- **RESIZE button**: 34
  - Switch the picture display (STRETCH, SIDE BAR, etc.).

- **PICTURE MODE button**: 34
  - Select the picture setting (Memory) stored in “Picture Mode” on the “Picture” menu.

**Note**

- All the buttons on the remote control are made of luminous material that is visible in the dark. Visibility will diminish over time. Exposure to light will recharge the luminous buttons.
Using the Remote Control

Usable Range
The remote control can be used to control the projector within the ranges shown in the illustration.

Note
- The signal from the remote control can be reflected off a screen for easy operation. However, the effective distance of the signal may differ depending on the screen material.

When using the remote control:
- Ensure not to drop, expose to moisture or high temperature.
- The remote control may malfunction under a fluorescent lamp. In this case, move the projector away from the fluorescent lamp.

Inserting the Batteries

1. Pull down the tab on the cover and remove the cover towards the direction of the arrow.

2. Insert the included batteries (two “AA” size).
   - Insert the batteries making sure the polarities correctly match the + and - marks inside the battery compartment.

3. Insert the lower tab of the cover into the opening, and lower the cover until it clicks in place.

Incorrect use of the batteries may cause them to leak or explode. Please follow the precautions below.

Caution
- Insert the batteries making sure the polarities correctly match the + and - marks inside the battery compartment.
- Batteries of different types have different properties, therefore do not mix batteries of different types.
- Do not mix new and old batteries.
  - This may shorten the life of new batteries or may cause old batteries to leak.
- Remove the batteries from the remote control once they have run out, as leaving them in can cause them to leak.
  - Battery fluid from leaked batteries is harmful to skin, therefore ensure to first wipe them and then remove them using a cloth.
- The batteries included with this projector may run down in a short period, depending on how they are kept.
  - Ensure to replace them as soon as possible with new batteries.
Quick Start

This section shows the basic operation. For details, see the page described below for each step.

Setup and Projection
Connection of the projector and the video equipment with an S-video terminal is explained as an example below.

1. Place the projector facing a screen

2. Connect the projector to the video equipment and plug the power cord into the AC socket of the projector

3. Remove the lens cap and turn the projector on

Page 16

Page 21-28

Page 28
4. Select the INPUT mode

Select the “INPUT 3” using the INPUT button on the projector or the INPUT 3 button on the remote control.

- When pressing \ on the projector, input mode switches in order of:
  INPUT 1 → INPUT 2 → INPUT 3 → INPUT 4 → INPUT 5 → DIGITAL

- When using the remote control, press \ to switch the INPUT mode.

5. Turn the video equipment on and playback

6. Adjust the projector angle, focus and zoom

   1. Adjust the focus
      On the projector
      1. Press \ or \.
      2. Adjust the focus by pressing \ or \.
      On the remote control
      1. Press \.
      2. Adjust the focus by pressing \ or \.

   2. Adjust the projected image size by adjusting zoom.
      On the projector
      1. Press \ or \.
      2. Adjust the zoom by pressing \ or \.
      On the remote control
      1. Press \.
      2. Adjust the zoom by pressing \ or \.

7. Correct trapezoidal distortion

Correcting trapezoidal distortion using the Keystone Correction

8. Turn the Power off

Press the STANDBY button, then press that button again while the confirmation message is displayed, to put the projector into standby mode.

- Unplug the power cord from the AC outlet after the cooling fan stops.
Setting Up the Projector

Position the projector perpendicular to the screen to achieve an optimal image.

**Note**
- The projector lens should be centred in the middle of the screen. If the horizontal line passing through the lens centre is not perpendicular to the screen, the image will be distorted, making viewing difficult.
- For an optimal image, position the screen so that it is not in direct sunlight or room light. Light falling directly on the screen washes out the colours, making viewing difficult. Close the curtains and dim the lights when setting up the projector in a sunny or bright room.

**Standard Setup (Front Projection)**
- Place the projector at the required distance from the screen according to the desired picture size. (See page 17.)

**Indication of the Projection Image Size and Projection Distance**

See “Screen Size and Projection Distance” on page 17 for details.

**Example**: When using a wide screen (16:9)

<table>
<thead>
<tr>
<th>Picture Size</th>
<th>Projection Distance</th>
</tr>
</thead>
<tbody>
<tr>
<td>200”</td>
<td>5.29m – 7.95m</td>
</tr>
<tr>
<td>150”</td>
<td>3.95m – 5.95m</td>
</tr>
<tr>
<td>100”</td>
<td>2.62m – 3.95m</td>
</tr>
<tr>
<td>80”</td>
<td>2.08m – 3.15m</td>
</tr>
<tr>
<td>60”</td>
<td>1.55m – 2.35m</td>
</tr>
</tbody>
</table>

![Diagram showing projection image size and distance](image-url)
Screen Size and Projection Distance

The projection screen size varies according to the distance from the lens of the projector to the screen. Install the projector so that projected images are projected onto the screen at the optimum size by referring to the table below. Use the values in the table as a reference when installing the projector.

When using a wide screen (16:9):
In case of displaying the 16:9 picture on the whole of the 16:9 screen.

<table>
<thead>
<tr>
<th>Picture (Screen) size</th>
<th>Projection distance [L]</th>
<th>Distance from the bottom of the image to the lens centre [H]</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>4.43 m</td>
<td>2.49 m</td>
</tr>
<tr>
<td>150</td>
<td>3.32 m</td>
<td>1.87 m</td>
</tr>
<tr>
<td>100</td>
<td>2.21 m</td>
<td>1.25 m</td>
</tr>
<tr>
<td>80</td>
<td>1.77 m</td>
<td>1.00 m</td>
</tr>
<tr>
<td>70</td>
<td>1.55 m</td>
<td>0.87 m</td>
</tr>
<tr>
<td>60</td>
<td>1.33 m</td>
<td>0.75 m</td>
</tr>
<tr>
<td>40</td>
<td>0.89 m</td>
<td>0.50 m</td>
</tr>
</tbody>
</table>

L: Projection distance(m)
L1: Minimum projection distance (m)
L2: Maximum projection distance (m)
H: Distance from the bottom of the image to the lens center (cm)

The formula for picture size and projection distance
L1 (m) = 0.02452x–0.05334
L2 (m) = 0.03671x–0.05215
H (cm) = 0.03810x

When using a normal screen (4:3):
In case of setting the 16:9 picture to the full horizontal width of the 4:3 screen.

<table>
<thead>
<tr>
<th>Picture (Screen) size</th>

L2 (m) = 0.03999x–0.05215
H (cm) = 0.04151x

Note
* There may be an error of ± 3% in the above values.
Setting Up the Projector

Projecting a Reversed Image

Projection from behind the Screen
■ Place a translucent screen between the projector and the audience.
■ Reverse the image by setting “Rear” in the “PRJ Mode” menu. (See page 52.)

Projection Using a Mirror
■ Place a mirror (normal flat type) in front of the lens.
■ When the translucent screen is placed between the mirror and audience, set to “Front” in the “PRJ Mode” menu. (See page 52.)
■ When the mirror is placed on the audience side, set to “Rear” in the “PRJ Mode” menu. (See page 52.)

Ceiling-mount Setup
■ It is recommended that you use the optional Sharp ceiling-mount bracket for this installation.
■ Before mounting the projector, contact your nearest Sharp Authorised Projector Dealer or Service Centre to obtain the recommended ceiling-mount bracket (sold separately). (AN-TK202 ceiling-mount bracket, AN-TK201 extension tube, AN-60KT ceiling adaptors for AN-TK202 or AN-TK201)
■ Invert the image by setting “Ceiling + Front” in “PRJ Mode”. See page 52 for use of this function.

Info
• When using a mirror, ensure to carefully position both the projector and the mirror so the light does not shine into the eyes of the audience.
INPUT Terminals and Connectable Main Equipment

INPUT 5/DIGITAL terminal
- Connecting video equipment with component output terminal (DVD player, DTV decoder, DVD recorder with hard disc, etc.). (See pages 22, 23.)
- Connecting the computer. (See pages 25, 26.)

INPUT 1, 2 terminal
Connecting video equipment with component output terminal (DVD player, DTV decoder, DVD recorder with hard disc, etc.). (See page 21.)

INPUT 3 terminal
Connecting video equipment with S-video output terminal (VCR, DVD player, etc.). (See page 24.)

INPUT 4 terminal
Connecting video equipment without S-video output terminal. (See page 24.)

RS-232C terminal
Connecting the computer to control the projector. (See page 27.)
### Samples of Cables for Connection

For more details of connection and cables, refer to the operation manual of the connecting equipment. You may need other cables or connectors not listed below.

<table>
<thead>
<tr>

<td>RS-232C</td>
</tr>
</tbody>
</table>
Connecting to Video Equipment

Before connecting, ensure to unplug the power cord of the projector from the AC outlet and turn off the devices to be connected. After making all connections, turn on the projector and then the other devices.

Ensure to read the operation manuals of the devices to be connected before making connections.

When connecting the component video equipment to the component input terminal on the projector (INPUT 1 or INPUT 2)

![Diagram showing connection of component video equipment to the projector](#)
Connecting to Video Equipment

When connecting the component video equipment to the DVI input terminal on the projector (INPUT 5)

• Before connecting the cable, switch the digital input type switch to “VIDEO”.

Note
• For this connection, select “Component” for “Signal Type” on the OSD menu or press \( \text{TV/COMP} \) on the remote control. (See page 48.)

When connecting the video equipment with RGB output terminal (INPUT 5)

• Before connecting the cable, switch the digital input type switch to “VIDEO”.

Note
• For this connection, select “RGB” for “Signal Type” on the OSD menu or press \( \text{TV/COMP} \) on the remote control. (See page 48.)
When connecting the video equipment with DVI output terminal (DIGITAL)
• Before connecting the cable, switch the digital input type switch to “VIDEO”.

Note
• Select DIGITAL mode when connecting to video equipment with the digital output terminal. (See page 29.)
Connecting to Video Equipment

When connecting video equipment with S-video output terminal (INPUT 3)

When connecting video equipment with video output terminal (INPUT 4)
Connecting to a Computer

When connecting a computer, ensure that it is the last device to be turned on after all the connections are made.

Connecting to a computer (INPUT 5)
• Before connecting the cable, switch the digital input type switch to “PC”.

Note
• Refer to “Computer Compatibility Chart” on page 61 for a list of computer signals compatible with the projector. Use with computer signals other than those listed may cause some of the functions not to work.
• When connecting the projector to a computer in this way, select “RGB” for “Signal Type” on the OSD menu or press 1 on the remote control. (See page 48.)
• A Macintosh adaptor may be required for use with some Macintosh computers. Contact your nearest Sharp Authorised Projector Dealer or Service Centre.
• Depending on the computer you are using, an image may not be projected unless the signal output setting of the computer is switched to the external output. Refer to the computer operation manual for switching the computer signal output settings.
Connecting to a Computer

When connecting a computer, ensure that it is the last device to be turned on after all the connections are made.

Connecting to a computer with DIGITAL RGB output Terminal (DIGITAL)

• Before connecting the cable, switch the digital input type switch to “PC”.

![Diagram of connecting a computer with DIGITAL RGB output Terminal (DIGITAL)]

Note

• Select DIGITAL mode when connecting to digital output terminal of the computer. (See page 29.)
• Before switching “Digital input type switch” and connecting, ensure to unplug the power cord of the projector from the AC outlet and turn off the computer to be connected. After making all connections, turn on the projector and then the computer.

“Plug and Play” function

This projector is compatible with VESA-standard DDC 1/DDC 2B. The projector and a VESA DDC compatible computer will communicate their setting requirements, allowing for quick and easy setup.

Before using the “Plug and Play” function, ensure to turn on the projector first and the connected computer last.

Note

• The DDC “Plug and Play” function of this projector operates only when used in conjunction with a VESA DDC compatible computer.
Controlling the Projector by a Computer

When the RS-232C terminal on the projector is connected to a computer, the computer can be used to control the projector and check the status of the projector.

When connecting to a computer using an RS-232C serial control cable

Note

• The RS-232C function may not operate if your computer terminal is not correctly set up. Refer to the operation manual of the computer for details.
• See “RS-232C Specifications and Command Settings” on page 60 for details.

Info

• Do not connect the RS-232C cable to a port other than the RS-232C terminal on the computer. This may damage your computer or projector.
• Do not connect or disconnect an RS-232C serial control cable to or from the computer while it is on. This may damage your computer.
Turning the Projector On/Off

Connecting the Power Cord
Plug the supplied power cord into the AC socket.

Turning the Projector On
Before performing the steps in this section, connect any equipment that you use with the projector. (See pages 19-27.)

Remove the lens cap and press \( \text{STANDBY} \) on the projector or \( \text{ON} \) on the remote control.
• The power indicator illuminates green.
• After the lamp indicator illuminates, the projector is ready to start operation.

Note
• The lamp indicator illuminates or blinks, indicating the status of the lamp.
  Green: The lamp is ready.
  Blinking green: The lamp is warming up or shutting down.
  Red: The lamp is shut down abnormally or the lamp should be replaced.
• When switching on the projector, a slight flickering of the image may be experienced within the first minute after the lamp has been illuminated. This is normal operation as the lamp’s control circuitry is stabilising the lamp output characteristics. This does not indicate malfunction.
• If the projector is put into standby mode and immediately turned on again, the lamp may take some time to illuminate.

Turning the Power Off (Putting the Projector into Standby Mode)

1. Press \( \text{STANDBY} \) on the projector or \( \text{ON} \) on the remote control, then press that button again while the confirmation message is displayed, to put the projector into standby mode.
2. Unplug the power cord from the AC outlet after the cooling fan stops.

Info
• English is the factory preset language. If you want to change the on-screen display to another language, change the language according to the procedure on page 52.

Note
• Do not unplug the power cord during projection or cooling fan operation. The cooling fan in this projector continues to run for about 90 seconds after the projector enters the standby mode. This can cause damage due to rise in internal temperature, as the cooling fan also stops.
Switching the INPUT Mode

Select the appropriate input mode for the connected equipment.

Press \( \text{INPUT 1}, \text{INPUT 2}, \text{INPUT 3}, \text{INPUT 4}, \text{INPUT 5} \) or \( \text{DIGITAL} \) on the remote control to select the input mode.

* When pressing \( \text{INPUT 1} \) on the projector, input mode switches in order of:

\[ \text{INPUT 1} \rightarrow \text{INPUT 2} \rightarrow \text{INPUT 3} \rightarrow \text{DIGITAL} \rightarrow \text{INPUT 5} \rightarrow \text{INPUT 4} \]

**Note**

* When no signal is received, “NO SIGNAL” will be displayed. When a signal that the projector is not preset to receive is received, “NOT REG.” will be displayed.
* The INPUT mode is not displayed when “OSD Display” of the “Options” menu is set to “(OFF)”. (See page 47.)

About the INPUT mode

<table>
<thead>
<tr>

</tbody>
</table>

**On-screen Display of INPUT Mode (Example)**

- INPUT 1 mode
  - INPUT 1
  - Component

- INPUT 2 mode
  - INPUT 2
  - Component

- INPUT 3 mode
  - INPUT 3
  - Using S-Video

- INPUT 4 mode
  - INPUT 4
  - Using Video

- INPUT 5 mode
  - INPUT 5
  - Component
  - RGB

* When switching the component and RGB input mode, press \( \text{INPUT 5} \) on the remote control or select “Signal Type” in the “Options” menu.
Image Projection

Adjusting the Focus

1. Press \( \text{ZOOM} \) on the remote control.
2. Press \( \downarrow \) or \( \uparrow \) on the remote control to adjust the focus.

Note
• You can also adjust the focus by using \( \text{ZOOM/FOCUS} \) and \( \downarrow \) or \( \uparrow \) on the projector.

Adjusting the Projected Image Size

1. Press \( \text{ZOOM} \) on the remote control.
2. Press \( \Delta \) or \( \nabla \) on the remote control to adjust the zoom.

Note
• You can also adjust the zoom by using \( \text{ZOOM/FOCUS} \) and \( \Delta \) or \( \nabla \) on the projector.
Using the Adjustment Feet

The height of the projector can be adjusted using the adjustment feet at the front and rear of the projector when the screen is located higher than the projector, the screen is inclined or when the installation site is slightly inclined. Install the projector so that it is as perpendicular to the screen as possible.

1 Lift the projector to adjust its height while pressing the HEIGHT ADJUST button.
   • The projector is adjustable up to approximately 12 degrees (6 steps).
   • When lowering the projector, it may be difficult to move the front adjustment foot because the installation surface is difficult to slide. In this case, pull the projector back slightly and adjust its height.

2 Remove your hands from the HEIGHT ADJUST button of the projector after its height has been finely adjusted.

3 Finely adjust the height and inclination by turning the rear adjustment feet.

Note
• When adjusting the projected image position, trapezoidal distortion occurs. In this case, see “Keystone Correction” on page 32.

Info
• Do not press the HEIGHT ADJUST button when the front adjustment foot comes out without firmly holding the projector.
• Do not hold the lens when lifting or lowering the projector.
• When lowering the projector, be careful not to get your fingers caught in the area between the adjustment foot and the projector.
Keystone Correction

This function can be used to adjust the Keystone settings.

Note
• When the image is projected from a direction at an angle, the image becomes distorted trapezoidally. The function for correcting trapezoidal distortion is called Keystone Correction.

1 Press \( \text{\textsection} \) on the remote control to enter the Keystone Correction mode.

2 Press \( \text{\textsection}/\text{\textsection} \) to select “H Keystone” or “V Keystone”.

3 Press \( \text{\textsection}/\text{\textsection} \) to move the \( \text{\textsection} \) mark on the selected adjustment item to the desired setting.

Note
• Straight lines and the edges of the displayed image may appear jagged, when adjusting the Keystone setting.
• When adjusting “H Keystone” and “V Keystone” at the same time, the values of adjustable angles for each setting become smaller.
• The adjustable value of the “V Keystone” becomes extremely small when “H Keystone” is made to be the maximum value.
• Keystone correction is disabled while the picture mode is set to “SMART STRETCH”. (See page 35.)

4 Press \( \text{\textsection} \).
• The on-screen display of the Keystone Correction mode will disappear.

\( \text{\textsection} \)-32
Placement of the Projected Image Using the Keystone Correction

Place the projector at a distance from the screen that allows images to be projected onto the screen by referring to “Screen Size and Projection Distance” on page 17.

Note
- The aspect ratio of the projected image also shifts slightly when the “H Keystone” and “V Keystone” functions are adjusted simultaneously.
- If you cannot correct trapezoidal distortion with Keystone correction, change the placement position of the projector.

1. Project the test pattern of the Keystone correction function onto the screen. Adjust the focus until the image on the screen comes into focus. (See page 30.)

2. Change the projection angle moving the projector or using the adjuster to properly project images onto the screen. (See page 31.)

3. Align the edge of the screen closest to the projector with the test pattern by adjusting the zoom and the adjuster. (See pages 30 and 31.)

4. Adjust the Keystone function so that the size of the projected image matches the screen size. (See page 32.)

5. Align the image on the screen by adjusting the zoom function and the adjuster.

6. Adjust the focus so that the projected image is in focus at the centre of the screen. (See page 30.)
Selecting the Picture Mode

You can select the picture setting (Memory) directly stored in “Picture Mode” on the “Picture” menu.

Press \[ \text{PICTURE MODE button} \] on the remote control.
- Each time the button is pressed while the display is on, the picture mode changes in order of:
  - Memory OFF —— Memory 1 —— Memory 2
  - Memory 5 —— Memory 4 —— Memory 3

Note
- This function can also be accessed from the OSD menu (see page 44).

Switching the High Brightness / High Contrast Mode

This function controls the quantity of the projected light and the contrast of the image.

Press \[ \text{RESIZE button} \] on the remote control.
- Each time the button is pressed while the display is on, the mode is switched between “HIGH BRIGHTNESS MODE” and “HIGH CONTRAST MODE”.

Note
- This function can also be accessed from the OSD menu (see page 44).

Adjusting the Picture Aspect Ratio

This function allows you to modify or customize the picture display mode to enhance the input image. Depending on the input signal, you can choose STRETCH, SIDE BAR, SMART STRETCH or CINEMA ZOOM image.

Press \[ \text{RESIZE button} \] on the remote control.
- Each time \[ \text{RESIZE button} \] is pressed, the picture mode changes as shown on the next page.
- To return to the standard image (“STRETCH”), press \[ \text{UNDO button} \] while “RESIZE” is displayed on the screen.
- You can also change the picture display mode by pressing \[ \text{RESIZE button} \] on the projector.
### Basic Operation

#### Input signal

<table>
<thead>
<tr>
<th>Input signal</th>
<th>Output screen image</th>
</tr>
</thead>
<tbody>
<tr>
<td>480I/480P/576I/576P/NTSC/PAL/SECAM</td>
<td>![Image]</td>
</tr>
<tr>
<td>540P</td>
<td>![Image]</td>
</tr>
<tr>
<td>720P</td>
<td>![Image]</td>
</tr>
<tr>
<td>VGA/SVGA/XGA</td>
<td>![Image]</td>
</tr>
</tbody>
</table>

#### Note
- “SMART STRETCH” cannot be selected while the Keystone correction (page 32) is being adjusted.
- Keystone correction (page 32) is disabled while the picture mode is set to “SMART STRETCH”.
- 580I/580P is displayed on the screen when signal 576I/576P is input.
- “STRETCH” is fixed when 540P, 720P or 1080I signal is entered.
- “SMART STRETCH” cannot be selected while input signal from a computer (VGA, SVGA or XGA) is entered.
Menu Items

The following shows the items that can be set in the projector.

### “Picture” menu

**Example: Screen for INPUT 1 mode**

<table>
<thead>
<tr>
<th>Picture</th>
<th>Brightness</th>
<th>Tint</th>
<th>Color</th>
<th>Sharp</th>
<th>Red</th>
<th>Blue</th>
<th>CLR Temp</th>
<th>Bright Boost</th>
<th>Picture Mode</th>
<th>IRIS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td></td>
</tr>
</tbody>
</table>

**Main Menu**

- **Contrast**
- **Bright**
- **Color**
- **Tint**
- **Sharp**
- **Red**
- **Blue**
- **CLR Temp**
- **Gamma Adj.**
- **Bright Boost**
- **Picture Mode**
- **IRIS**

**Sub Menu**

- ** CLR Temp**
- **Gamma Adj.**

**Note**

- “Tint” cannot be used with PAL, SECAM, PAL-M, PAL-N or PAL-60.
- “Color”, “Tint”, “Sharp”, “Clock”, “Phase”, “H-Pos”, “V-Pos” and “Auto Sync” cannot be used in the DIGITAL mode.
- “Fine Sync” menu cannot be displayed in the INPUT 3 and INPUT 4 modes.

### “Fine Sync” menu

**Example: Screen for INPUT 5 (RGB) mode**

<table>
<thead>
<tr>
<th>Fine Sync</th>
<th>Clock</th>
<th>Phase</th>
<th>H-Pos</th>
<th>V-Pos</th>
<th>Reset</th>
<th>Special Modes</th>
<th>Auto Sync</th>
<th>Signal Info</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td><img src="image.png" alt="Value" /></td>
<td></td>
</tr>
</tbody>
</table>

**Main Menu**

- **Fine Sync**
- **Phase**
- **H-Pos**
- **V-Pos**
- **Reset**

**Sub Menu**

- **Fine Sync**

**Note**

- “Fine Sync” menu cannot be displayed in the INPUT 3 and INPUT 4 modes.

---

*1: Items when selecting INPUT 1, 2, 3, 4 or when inputting component signal through INPUT 5

*2: Item when inputting RGB signal through INPUT 5
“Options” menu

Example: Screen for INPUT 1 mode

Example: Screen for INPUT 4 mode

“Language” menu

“PRJ Mode” menu

Main Menu

Sub Menu
Using the Menu Screen

The menu can be operated to achieve two functions, adjustments and settings. (For setting the menu items, see pages 40 and 41.)

Menu Selections (Adjustments)

• This operation can also be performed by using the buttons on the projector.

1 Press \( \text{MENU} \).
   • The “Picture” menu screen for the selected input mode is displayed.

2 Press \( \uparrow \) or \( \downarrow \) to display the other menu screens.
   • The menu icon for the selected menu screen is highlighted.

Example: “Picture” menu screen for INPUT 1 mode

Menu icons

Note
• The “Fine Sync” menu is not available for selecting INPUT 3 or 4.
3 Press ▲ or ▼ to select the item you want to adjust.
   • The selected item is highlighted.
     (Example: Selecting “Bright”)

To adjust the projected image while viewing it

Press ▼.
   • The selected single adjustment item (e.g. “Bright”) appears on the lower part of the screen.
   • When pressing ▲ or ▼, the next item will be displayed. (e.g. “Bright” is replaced with “Color” by pressing ▼.)

Note
   • Press ◄ to return to the previous screen.

4 Press ► or ◄ to adjust the item selected.
   • The adjustment is stored.

5 Press ◄.  
   • The menu screen will disappear.
Using the Menu Screen

The menu can be operated to achieve two functions, adjustments and settings. The “setting” item is displayed by < or > on the menu screen. (For adjusting the menu items, see pages 38 and 39.)

Menu Selections (Settings)

• This operation can also be performed by using the buttons on the projector.

1 Press MENU.
• The “Picture” menu screen for the selected input mode is displayed.

2 Press ▲ or ▼ to display the other menu screens.
• The menu icon for the selected menu screen is highlighted.

<table>
<thead>
<tr>
<th>Menu icon</th>

</tr>
<tr>
<td></td>
<td>PRJ Mode</td>
</tr>
</tbody>
</table>

Note
• The “Fine Sync” menu is not available for selecting INPUT 3 or 4.
3 Press ▲ or ▼ to select the item you want to set, and then press ► to display the sub menu.
   • The selected item is highlighted.
   (Example: Selecting “Menu Position”)

   **Note**
   • Press ◀ or ▶ to return to the previous screen.
   • For some items, press ◀ or ▶ to select the icon using ◀.

4 Press ▲ or ▼ to select the setting of the item displayed in the sub menu.

5 Press ◐.  
   • The selected item is set.

6 Press ◐.  
   • The menu screen will disappear.
You can adjust the projector’s picture to your preferences using the “Picture” menu.

**Adjusting the Image**

**Menu operation**  ➔  Page 38

**Note**

- First select “Memory 1-5” or “Memory OFF” when you want to save the “Picture” menu settings. See page 44 for details.

**Example: “Picture” menu screen for INPUT 1 mode**

<tr>
<td>8500K</td>
<td></td>
</tr>
<tr>
<td>9300K</td>
<td></td>
</tr>
<tr>
<td>10500K</td>
<td></td>
</tr>
</tbody>
</table>

“CLR Temp” is fine adjusted by following the procedure below.

1. Select “CLR Temp” in the “Picture” menu on the menu screen and press ↓↓.
   - A single menu bar of “CLR Temp” is displayed.

![CLR Temp menu bar](image)

2. Press ▲ or ▼ to fine adjust the colour temperature.
   - With the lower value selected, the projected image becomes magenta-tinged. With the higher value selected, the projected image becomes green-tinged.
   - Pressing ▼ or ▲ changes the value of the colour temperature in the sub menu.

**Note**

- “Color”, “Tint” and “Sharp” do not appear for RGB input in INPUT 5 mode.
- To reset all adjustment items, select “Reset” on the “Picture” menu screen and press ↓↓.
- “Tint” cannot be used with PAL, SEGAM, PAL-M, PAL-N or PAL-60.
- “Color”, “Tint” and “Sharp” cannot be used in the DIGITAL mode.

**Note**

- Values on “CLR Temp” are only for general standard purposes.
Gamma Correction Function

Gamma is an image quality enhancement function. Four gamma settings are available to allow for differences in the brightness of the room.

Menu operation ➔ Page 40

Example: “Picture” menu screen for INPUT 1 mode

Description of Gamma Modes

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Standard</td>
<td>Standard picture without gamma correction</td>
</tr>
<tr>
<td>Cinema 1</td>
<td>Gives greater depth to darker portions of images.</td>
</tr>
<tr>
<td>Cinema 2</td>
<td>Brightness is toned down and the image becomes more balanced.</td>
</tr>
<tr>
<td>Cinema 3</td>
<td>Brighten the darker portions of images for easier viewing in a dimly lit room.</td>
</tr>
</tbody>
</table>

“Gamma Adj.” is fine adjusted by following the procedure below.

1. Select “Gamma Adj.” in the “Picture” menu on the menu screen and press .
   • A single menu bar of “Gamma Adj.” is displayed.

2. Press ▲ or ▼ to fine adjust the gamma correction.
   • With the lower value selected, the projected image becomes darker. With the higher value selected, the projected image becomes brighter.
   • Pressing ◄ or ► changes the value of the Gamma in the sub menu.

Emphasising the Contrast

This function emphasises the bright portions of images to obtain a higher contrast image.

Menu operation ➔ Page 40

Example: “Picture” menu screen for INPUT 1 mode

Description of Bright Boost settings

<table>
<thead>
<tr>
<th>Selectable Items</th>
<th>Description</th>

</tbody>
</table>
Picture Mode Function

This function stores all items set in “Picture”. Five settings can be stored separately in “Memory 1” to “Memory 5”. Each stored setting is reassigned to each input mode (INPUT 1 to INPUT 5). Even when the input mode or signal is changed, you can easily select optimal settings from the stored settings.

Menu operation ➔ Page 40

Example: “Picture” menu screen for INPUT 1 mode

Select “Picture Mode” on the “Picture” menu and the memory location where you want to store the settings. Then adjust the setting items on the “Picture” menu.

<table>
<thead>
<tr>
<th>Memory Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Memory 1-5</td>
<td>Settings of all items in “Picture” can be stored for the respective input modes. The stored settings (Memory 1 to 5) can be selected in any input modes.</td>
</tr>
<tr>
<td>Memory OFF</td>
<td>Besides “Memory 1” to “Memory 5”, other settings on the “Picture” menu can be stored for each input mode. The settings stored in “Memory OFF” cannot be applied when another input mode is selected.</td>
</tr>
</tbody>
</table>

If you want to apply the stored settings on the “Picture” menu, select input mode and then press [ ], or select “Picture Mode” in the “Picture” menu.

If you want to change the stored settings, select the memory location for those settings and make settings on the “Picture” menu.

Switching the High Brightness/High Contrast Mode

This function changes the brightness and contrast of the projected image. It can be operated using the IRIS button on the remote control.

Menu operation ➔ Page 40

Example: “Picture” menu screen for INPUT 1 mode

Description of IRIS Settings

<table>
<thead>
<tr>

<tr>
<td>Phase</td>
<td>Adjusts horizontal noise (similar to tracking on your VCR).</td>
</tr>
<tr>
<td>H-Pos</td>
<td>Centres the on-screen image by moving it to the left or right.</td>
</tr>
<tr>
<td>V-Pos</td>
<td>Centres the on-screen image by moving it up or down.</td>
</tr>
</tbody>
</table>

Special Modes Setting

Ordinarily, the type of input signal is detected and the correct resolution mode is automatically selected. However, for some signals, the optimal resolution mode in "Special Modes" on the "Fine Sync" menu may need to be selected to match the computer display mode.

Menu operation ➔ Page 40

Example: "Fine Sync" menu screen for INPUT 5 (Component) mode

Note

- You can automatically adjust the computer image by setting “Auto Sync” on the “Fine Sync” menu to (ON) or pressing ( ) on the remote control. See page 46.
- “Clock”, “Phase”, “H-Pos” and “V-Pos” cannot be used in the DIGITAL mode.
- “Clock” and “Phase” cannot be used in the Component mode.
- The adjustable area of each item may be changed according to the input signal.
- To reset all adjustment items, select “Reset” and press .
Computer Image Adjustment ("Fine Sync" menu)

**Auto Sync Adjustment**
Select whether the image is to be synchronized automatically when switching the signal with "ON" or "OFF".

Menu operation  ➔ Page 40

Example: "Fine Sync" menu screen for INPUT 5 (RGB) mode

**Description of Auto Sync Adjustment**

<table>
<thead>
<tr>
<th>Selectable Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>(ON)</strong></td>
<td>Auto Sync adjustment will occur when the projector is turned on or when the input signals are switched, when connected to a computer.</td>
</tr>
<tr>
<td><strong>(OFF)</strong></td>
<td>Auto Sync adjustment is not automatically performed.</td>
</tr>
</tbody>
</table>

**Note**
- Auto Sync adjustment is also performed by pressing [Auto Sync] on the remote control.
- The Auto Sync adjustment may take some time to complete, depending on the image of the computer connected to the projector.
- When the optimum image cannot be achieved with Auto Sync adjustment, use manual adjustments. (See page 45.)
- "Auto Sync" cannot be used in the DIGITAL mode.

**Checking the Input Signal**
This function allows you to check the current input signal information.

Menu operation  ➔ Page 40

Example: "Fine Sync" menu screen for INPUT 5 (RGB) mode

![Checking the Input Signal Screen](image)

**Note**
- 540P is displayed on the screen when signal 1080i is inputted during DVI connection.
Using the “Options” Menu

You can use the “Options” menu to enhance the usage for the projector.

Checking the Lamp Life Status

You can confirm the cumulative lamp usage time and the remaining lamp life (percentage).

Menu operation ➔ Page 40

Example: “Options” menu screen for INPUT 1 mode

<table>
<thead>
<tr>
<th>Lamp usage condition</th>
<th>Remaining lamp life</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Life”</td>
<td>100%</td>
</tr>
<tr>
<td></td>
<td>5%</td>
</tr>
</tbody>
</table>

- Operated exclusively in Eco mode (Eco mode)
  - Approx. 3,000 hours
  - Approx. 150 hours

- Operated exclusively in Standard mode (Standard mode)
  - Approx. 2,000 hours
  - Approx. 100 hours

Note

- It is recommended that the lamp be changed when the remaining lamp life becomes 5%. (See page 56.)
- The table above indicates rough estimates in the case of using only in each mode shown.
- Remaining lamp life changes within the range of the values shown depending on the frequency at which “Eco Mode” is switched to “Eco mode” and “Standard mode.” (See page 49.)
- The lamp life may vary depending on the usage condition.

Setting On-screen Display

This function allows you to turn off the on-screen messages that appear during input select.

Menu operation ➔ Page 40

Example: “Options” menu screen for INPUT 1 mode

</tr>
</tbody>
</table>
Selecting the On-screen Display Language

The projector can switch the on-screen display language among 11 languages: English, German, Spanish, Dutch, French, Italian, Swedish, Portuguese, Chinese, Korean or Japanese.

Example: “Language” menu screen for INPUT 1 mode

1. Press on the remote control.
   • The “Picture” menu will be displayed.

2. Press or to select the “Language” menu icon ( ).
   • The “Language” menu will be displayed.

3. Press or to select the desired language, and then press .
   • The language you selected will be set as the on-screen display.

4. Press .
   • The “Language” menu will disappear.

Note
• This procedure can also be performed by using the buttons on the projector.

Setting the Projection Mode

This projector is equipped with a reverse/invert image function that allows you to reverse or invert the projected image for various applications.

Example: “PRJ Mode” menu screen

Description of PRJ Modes

<table>
<thead>
<tr>
<th>Selectable items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front</td>
<td>Normal image</td>
</tr>
<tr>
<td>Ceiling + Front</td>
<td>Inverted image</td>
</tr>
<tr>
<td>Rear</td>
<td>Reversed image</td>
</tr>
<tr>
<td>Ceiling + Rear</td>
<td>Reversed and inverted image</td>
</tr>
</tbody>
</table>

Note
• This function is used for the reversed image and ceiling-mount setups. (See page 18.)
Cleaning the projector
- Ensure to unplug the power cord before cleaning the projector.
- The cabinet as well as the operation panel is made of plastic. Avoid using benzene or thinner, as these can damage the finish on the cabinet.
- Do not use volatile agents such as insecticides on the projector.
- Do not attach rubber or plastic items to the projector for long periods. The effects of some of the agents in the plastic may cause damage to the quality or finish of the projector.
- Wipe off dirt gently with a soft flannel cloth.
- When the dirt is hard to remove, soak a cloth in a mild detergent diluted with water, wring the cloth well and then wipe the projector.
- Strong cleaning detergents may discolour, warp or damage the coating on the projector. Make sure to test on a small, inconspicuous area on the projector before use.

Cleaning the lens
- Use a commercially available blower or lens cleaning paper (for glasses and camera lenses) for cleaning the lens. Do not use any liquid type cleaning agents, as they may wear off the coating film on the surface of the lens.
- As the surface of the lens can easily get damaged, ensure not to scrape or hit the lens.

Cleaning the exhaust and intake vents
- Use a vacuum cleaner to clean dust from the exhaust vent and the intake vent.

Info
- If you want to clean the air vents of projector, ensure to press on the projector or on the remote control and put the projector into standby mode. After the cooling fan has stopped, unplug the power cord from the AC socket and clean the vents.
Maintenance Indicators

■ The warning lights on the projector indicate problems inside the projector.
■ If a problem occurs, either the temperature indicator or the lamp indicator will illuminate red, and
  the projector will enter the standby mode. After the projector has entered the standby mode, follow
  the procedures given below.

About the temperature warning indicator

If the temperature inside the projector increases, due to blockage of the air vents, or the setting location,
 TEMP will illuminate in the lower left corner of the picture. If the temperature keeps on rising, the lamp will
 turn off and the temperature warning indicator will blink, the cooling fan will run for a further 90 seconds, and
 then the projector will enter the standby mode. After TEMP appears, ensure to perform the measures
 described on page 55.

About the lamp indicator

■ When the remaining lamp life becomes 5% or less, (yellow) and “Change The Lamp.” will be
  displayed on the screen. When the percentage becomes 0%, it will change to (red), the lamp will
  automatically turn off and then the projector will automatically enter the standby mode. At this time,
  the lamp indicator will illuminate in red.
■ If you try to turn on the projector a fourth time without replacing the lamp, the projector will not turn on.
## Maintenance indicator

<td>• Relocate the projector to an area with proper ventilation (see page 7).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• Cooling fan breakdown</td>
<td>• Take the projector to your nearest Sharp Authorised Projector Dealer or Service Centre for repair.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• Internal circuit failure</td>
<td>• Clean the exhaust and intake vents. (See page 53.)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>• Clogged air intake</td>
<td></td>
</tr>
</tbody>
</table>

| Lamp indicator | Green on | Red on (Standby) | The lamp does not illuminate. | — | Disconnect the power cord from the AC outlet, and then connect it again. |
|               | Green blinks when the lamp is warming up or shutting down. | | | |
|               | Red on | Time to change the lamp. | • Remaining lamp life becomes 5% or less. | | • Carefully replace the lamp. (See page 57.) |
|               | Red on (Standby) | The lamp does not illuminate. | • Burnt-out lamp | • Take the projector to your nearest Sharp Authorised Projector Dealer or Service Centre for repair. |
|               | | | • Lamp circuit failure | • Please exercise care when replacing the lamp. |

### Info

- If the temperature warning indicator illuminates and the projector enters the standby mode, check whether any of the ventilation holes are blocked (page 7) and then try turning the power back on. Wait until the projector has cooled down completely before plugging in the power cord and turning the power back on. (At least 10 minutes.)
- If the power is turned off for a brief moment due to power outage or some other cause while using the projector, and the power supply recovers immediately after that, the lamp indicator will illuminate in red and the lamp may not be lit. In this case, unplug the power cord from the AC outlet, replace the power cord in the AC outlet and then turn the power on again.
- Do not unplug the power cord after the projector has entered the standby mode and while the cooling fan is running. The cooling fan runs for about 90 seconds.
Regarding the Lamp

Lamp

■ It is recommended that the lamp (optional: AN-K2LP) be replaced when the remaining lamp life becomes 5% or less, or when you notice a significant deterioration in the picture and colour quality. The lamp life (percentage) can be checked with the on-screen display. See page 47.
■ Purchase a replacement lamp of type AN-K2LP from your place of purchase, nearest Sharp Authorised Projector Dealer or Service Centre.

Caution Concerning the Lamp

■ This projector utilizes a pressurized mercury lamp. A loud sound may indicate lamp failure. Lamp failure can be attributed to numerous sources such as: excessive shock, improper cooling, surface scratches or deterioration of the lamp due to a lapse of usage time. The period of time up to failure largely varies depending on the individual lamp and/or the condition and the frequency of use. It is important to note that failure can often result in the bulb cracking.
■ When the lamp replacement indicator and on-screen display icon are illuminated, it is recommended that the lamp be replaced with a new one immediately, even if the lamp appears to be operating normally.
■ Should the lamp break, the glass particles may spread inside the lamp cage or gas contained in the lamp may be vented into the room from the exhaust vent. Because the gas in this lamp includes mercury, ventilate the room well if the lamp breaks and avoid all exposure to the released gas. In case of exposure to the gas, consult a doctor as soon as possible.
■ Should the lamp break, there is also a possibility that glass particles may spread inside of the projector. In such a case, it is recommended you contact your nearest Sharp Authorised Projector Dealer or Service Centre to assure safe operation.

Replacing the Lamp

Caution

• Do not remove the lamp unit from the projector right after use. The lamp will be very hot and may cause burn or injury.
• Wait at least one hour after the power cord is disconnected to allow the surface of the lamp unit to fully cool before removing the lamp unit.

■ Carefully change the lamp by following the instructions described in this section. *If you wish, you may have the lamp replaced at your nearest Sharp Authorised Projector Dealer or Service Centre.

* If the new lamp does not light after replacement, take your projector to the nearest Sharp Authorised Projector Dealer or Service Centre for repair.
Removing and Installing the Lamp Unit

⚠️ Warning!
• During projector operation, the lamp unit is very hot. Do not remove the lamp unit from the projector right after use. The lamp and parts around the lamp will be very hot and may cause burn or injury.

Info
• Ensure to remove the lamp unit using the handle. Ensure not to touch the glass surface of the lamp unit or the inside of the projector.
• To avoid injury to yourself and damage to the lamp, ensure to carefully follow the steps below.
• Do not loosen other screws except for the lamp unit cover and lamp unit.

1 Press [STANDBY] on the projector or [STANDBY] on the remote control to put the projector into standby mode.
• Wait until the cooling fan stops.

2 Disconnect the power cord.
• Unplug the power cord from the AC socket.
• Leave the lamp until it has fully cooled down (about 1 hour).

3 Remove the lamp unit cover.
• Turn the projector over. Loosen the user service screw (①) that secures the lamp unit cover. Hold the tab and slide towards the direction of the arrow to remove the lamp unit cover (②).
Regarding the Lamp

4 Remove the lamp unit.
   • Loosen the two securing screws from the lamp unit. Hold the lamp unit by the handle and pull it in the direction of the arrow. At this time, keep the lamp unit horizontal and do not tilt it.

5 Insert the new lamp unit.
   • Press the lamp unit firmly into the lamp unit compartment. Fasten the securing screws.

6 Replace the lamp unit cover.
   • Align the lamp unit cover and slide it to close. Then tighten the user service screw to secure the lamp unit cover.

Info
• If the lamp unit and lamp unit cover are not correctly installed, the power will not turn on, even if the power cord is connected to the projector.

Resetting the Lamp Timer

Reset the lamp timer after replacing the lamp.

Info
• Make sure to reset the lamp timer only when replacing the lamp. If you reset the lamp timer and continue to use the same lamp, this may cause the lamp to become damaged or explode.

1 Connect the power cord.
   • Plug the power cord into the AC socket of the projector.

2 Reset the lamp timer.
   • Press ◄, ◄, ◄, ◄ and ► on the projector in order, and then press ◄ on the projector.
   • “LAMP 0000H” is displayed on the lower left of the screen, indicating that the lamp timer is reset.

RS-232C Specifications and Command Settings

**PC control**
A computer can be used to control the projector by connecting an RS-232C cable (null modem, cross type, commercially available) to the projector. (See page 27 for connection.)

**Communication conditions**
Set the serial port settings of the computer to match that of the table.
Signal format: Conforms to RS-232C standard.
Baud rate: 9,600 bps
Data length: 8 bits
Parity bit: None
Stop bit: 1 bit
Flow control: None

**Basic format**
Commands from the computer are sent in the following order: command, parameter, and return code. After the projector processes the command from the computer, it sends a response code to the computer.

Command format

```
C1 C2 C3 C4 P1 P2 P3 P4
```

Return code (0DH)

Response code format

```
Ok
```

Normal response

```
E R R
```

Problem response (communication error or incorrect command)

```
O K
```

Return code (0DH)

**Info**

- When more than one code is being sent, send each command only after the OK response code for the previous command from the projector is verified.
- When using the computer control function of the projector, the projector’s operating status cannot be read by the computer.

**Commands**

**Example:**
- When power on.

```
POWR _ _ _ I
```

```
OK
```

**Note**

- If an underbar (_) appears in the parameter column, enter a space.
This projector may not be able to display images from notebook computers in simultaneous (CRT/LCD) mode. Should this occur, turn off the LCD display on the notebook computer and output the display data in “CRT only” mode. Details on how to change display modes can be found in your notebook computer’s operation manual.

The table below lists signal codes that are compatible with the projector. When the images are distorted or cannot be projected, adjust the output signal of your computer and so forth while referring to the table below.

### Computer Compatibility Chart

The table below lists signal codes that are compatible with the projector. When the images are distorted or cannot be projected, adjust the output signal of your computer and so forth while referring to the table below.

#### Computer
- **Horizontal Frequency:** 15–70 kHz
- **Vertical Frequency:** 43–75 Hz
- **Pixel Clock:** 12–80 MHz
- Compatible with sync on green
- XGA compatible in intelligent compression

**Glossary**

**Aspect Ratio**
Width and height ratio of an image. The normal aspect ratio of a computer and video image is 4:3. There are also wide images with an aspect ratio of 16:9 and 21:9.

**Auto Sync**
Optimizes projected computer images by automatically adjusting certain characteristics.

**Background**
Initial setting image projected when no signal is being output.

**Clock**
Clock adjustment is used to adjust vertical noise when clock level is incorrect.

**CLR Temp (Colour temperature)**
Function that can be used to adjust the colour temperature to suit the type of image input to the projector. Decrease the colour temperature to create warmer, reddish images for natural flesh tones, or increase to create cooler, bluish images for a brighter picture.

**Composite sync**
Signal combining horizontal and vertical sync pulses.

**DVI (Digital Visual Interface)**
Display digital interface that also supports analog interfaces.

**Gamma**
Image quality enhancement function that offers a richer image by brightening the darker portions of the image without altering the brightness of the brighter portions. You can select from four different modes: Standard, Cinema 1, Cinema 2 and Cinema 3.

**Intelligent compression and expansion**
High quality resizing of lower and higher resolution images to fit the projector’s native resolution.

**Keystone Correction**
Function to digitally correct a distorted image when the projector is set up at an angle, smoothes out jaggies on keystone images and compresses the image not only horizontally but vertically keeping the 16:9 aspect ratio.

**Phase**
Phase shift is a timing shift between isomorphic signals with the same resolution. When phase level is incorrect, the projected image typically displays horizontal flicker.

**Resize**
Allows you to modify or customize the picture display mode to enhance the input image. You can select from four different modes: STRETCH, SIDE BAR, SMART STRETCH and CINEMA ZOOM.

**RS-232C**
Function to control the projector from the computer by using the RS-232C ports on the projector and computer.

**Stretch**
Mode that stretches the 4:3 image horizontally to display it on the wide screen.
