

Personal Mobile Communicator

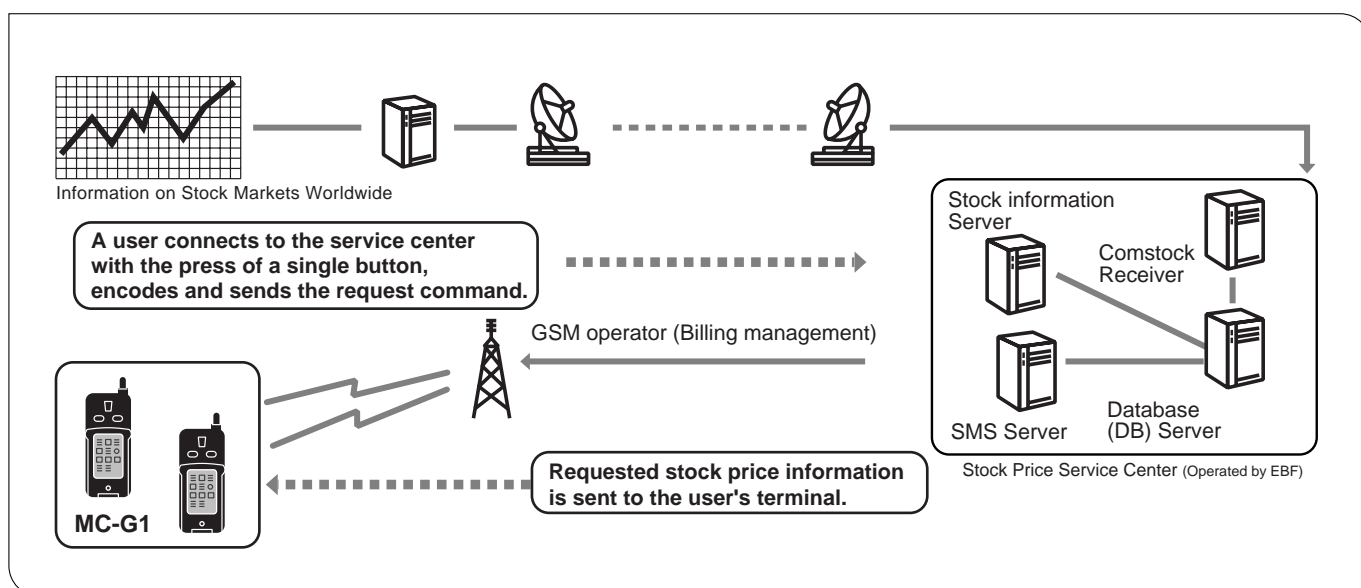

MC-G1

Stock Price Information Service for Mobile Terminals

This service transmits stock price information to mobile communication terminals under a GSM network environment. Highly efficient service is provided, billing only for the time used because users can access the service any time with no membership or monthly fees.

Service is ideal for users who need services such as personal stock trading and monitoring the market under a mobile environment.

- Price information on up to 25 stocks can be updated at once.
- Real-time or delayed updates on stock price information can be selected.
- Service can be set to provide notification of attainment of the stock price set by users.
