

# Personal Mobile Communicator MC-G1

## Smart Form: Application Development Platform

Smart Form is a platform for developing HTML-based applications, enabling the easy development on a PC base for value-added service and business applications, in an open environment.

The transaction data using Smart Form can be sent and received between MC-G1 and servers, using SMS on a GSM network. This platform provides a solution for data processing, reporting and data input systems for business applications. Smart Form is ideal for reporting systems and inquiry systems such as Field Maintenance, Sales Force Automation, Telemetry, etc.
